GQ/GU Radius Arm to Chassis Rubber Bushings

If your Patrol Radius Arm to Chassis Bushings are showing wear characteristics as illustrated in the pics opposite, it could be due to a number of reasons.

1. The Durometer of the rubber replacement bushing is too soft - rectified by fitting Roadsafe rubber bushings S0500R in 65 duro

2. If the vehicle has over 2" lift the angle of the radius arm will promote excessive pre-load and premature wear of the bushings - rectified by fitting Roadsafe Drop Boxes (GUDBL/R) or new Drop Arms.
