Universal Arch Flares

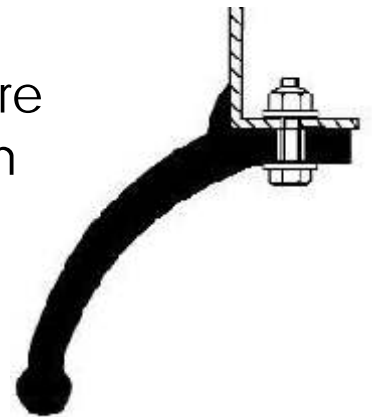

Under Edge Flare Kit

Roadsafe have made up an Under Edge Flare Kit to make sales of this fast moving item easy & convenient. The New Under Edge Flare Kit consists of a 3metre length of Roadsafe 51-462 under edge rubber flare extrusion, in addition to 60 screws! It is recommended that screws be utilised every 50mm during installation, to get an even and smooth looking finish to the flare shape. The 3m length allows fitment to two wheel arches.

The Roadsafe Rubber Edge Arch Flare Extrusion is manufactured from hard wearing Ozone and UV resistant EPDM rubber. The arch flare offers great flexibility and robustness in the toughest conditions.
