

# Shackles & Spacers

## Triton ML MN

**CSSTR125**

Installation of Coil Strut Spacers is the ideal way of generating lift on vehicles with strut front end. Coil Strut Spacers bolt to the top of the Strut, and maintain full articulation of the front end. New to the Roadsafe 4WD range is the 25mm Coil Strut Spacer for Triton ML MN. This 25mm Spacer gives approx. 50mm lift.

**2" Over Standard**

**SK405EXT**

If you are after more flex in your vehicles rear end, then Extended Shackles are an easy way to achieve it. Basically the extended shackle creates a greater sweeping arc of the shackle which in turn provides for more wheel travel and a nicer ride. Roadsafe Extended Shackles are engineered to the highest standard, with factory size Greasable Pins (to allow installation of factory bushings) and 50mm extended plates. All Roadsafe extended shackles incorporate a stepped bolt design, ensuring that the shackles cannot be overlightened, resulting in deformation of the bushings. In addition Roadsafe shackles have inbuilt Great Nipple protection to prevent breakage when hit by errant branches & the like. Giving 50mm more length than the factory shackle you will also see a lift of between 25-30mm.
