

Heavy Duty Tow Point 150 series Prado

Modified to Suit for TJM T13 Outback Bar

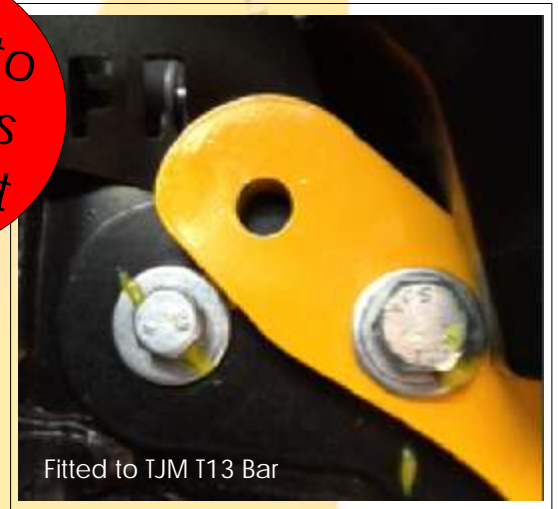

Due to customer fitment issues, we have modified the RP-PRA150 to suit for the TJM T13 Outback Bar. Due to this modification, the new destruction testing on the revised point resulted in a lower load to be applied before deformation. Subsequently the WLL on these points has been altered to 3250kgs per point. Due to the nature of the tow point components, and the way in which they could be used by untrained enthusiasts - safety is our highest priority. Setting a destruction tested WLL is a major part of encouraging safe use of these components within tested straight line pull load limits.

Fitted to Ironman Bar

Rated to
3250kgs
per Point

Destruction
Tested to
9 tonne

Fitted to TJM T13 Bar

Part Number RP-PRA150
