

Ball Weight Scale Accessories

Know your Ball Weight for Safer Towing

The 'Towsafe Caravan and Trailer Ball Weight Scale' now makes it easy to measure the ball weight of trailers or caravans. Too little or too much weight on your tow ball can have some dangerous implications including excessive trailer sway, poor handling and difficulty braking. Exceeding the vehicles maximum ball weight is both unsafe and illegal. Don't risk the safety of your self or others, check your ball weight before you hit the road! To make the Ball Weight Scales more user friendly when the trailer is without a ball coupling, now available is an 'A' frame adaptor. The MH-BWS-ADP has a protective rubber insert to protect the top of the Ball Weight Scales and fits under the 'A' Frame. Also now available is a Storage Bag for the Ball Weight Scale.
