

Manual Free Wheeling Hub Re-Inforcing Rings (Pair)

Nissan Patrol GQ / GU

Increase the strength of the factory or aftermarket free wheeling hubs by fitting a pair of Roadsafe 4WD re-inforcing hub rings. Roadsafe 4WD Hub Rings are sold as a pair (use existing factory bolts for installation). Simply undo the 6 bolts, remove & discard the 3 factory washers (if fitted) and replace with the new hub ring, then refit & tighten the 6 bolts (to factory torque specs). Manufactured from 4mm 350mpa Steel, the Roadsafe 4WD hub rings increase the strength of the manual free wheel hubs. Corrosion resistant yellow zinc plating (can be painted) the rings have been designed to suit for both Factory (genuine) and Aftermarket (Nissan style) hubs.

**SB010**

Part Number: SB010
