

Press Release – Immediate Release 1st May 2012

Roadsafe 4WD Landcruiser Rods - Range Upgrade

Roadsafe Automotive, steering and suspension specialists, have expanded their range of 4WD items to include complete upgraded Relay & Track Rods to suit for 75, 76, 78, 79, 80 & 105 series Landcruisers.

“We have a close association with a variety of mine corporation suppliers who wanted us to develop Landcruiser rods complete with ends, as all that was available genuine was ‘rod only’” explains Tania Allatt, Roadsafe Product Marketing Manager.

Original design relied upon a clamp end over the tie rod end thread. The new rods have been designed with upgraded wall thickness, in addition to the more effective lock nut for tie rod end location and adjustment.

Tania explained “Roadsafe is very strong with research, development and testing. It is important to us to ensure that all new items are researched properly to determine whether a different or upgraded design is required...developed in the right manner to suit the application... and tested suitably in a variety of ways (both in-house and ‘real life’ scenarios) to ensure the component will last”.

The Roadsafe Landcruiser Rods are supplied electrocoated, for corrosion and rust resistance, with a satin black finish to follow through the tuff truck look.

The new rods are available now from Roadsafe Automotive, and are manufactured to be suitable as an upgraded replacement for a standard or lifted landcruiser.
