

Press Release – Immediate Release 21st May 2014

Roadsafe Protection Plates

To compliment its 4WD lineup, Roadsafe Automotive has released a range of Steel Protection Plates for 4WD underbody protection.

Featuring 39 numbers covering 64 applications Roadsafe 4WD have your underbody protection plate requirements covered. “Like all Roadsafe 4WD products, our protection plates are built to handle the toughest situations, simply because we 'overkill' the design!” said Tania Allatt, Roadsafe Marketing Manager.

Roadsafe 4WD Protection Plates perfectly integrate with the vehicles key underbody designs with carefully positioned water dispersion and venting holes. The Roadsafe 4WD Protection Plates work to protect the key undercar components without compromising airflow, water disbursement or durability. Offroad driving exposes the vehicle to damage from a huge variety of obstacles found on the tracks, from rocks to logs. Roadsafe 4WD protection plates protect the vehicle undercarriage from the majority of bumps and scrapes against these obstacles. Tania advised “Roadsafe 4WD Protection Plates are especially useful in vehicles with IFS or general low ride height, just for general piece of mind when tackling track obstacles in the bush. We’re all for prevention, rather than cure. Prevention is generally a much more cost effective option!”. Roadsafe 4WD Protection Plates are manufactured from 3mm steel, ensuring that while tough, the plates are not too heavy or rigid to contribute to structural damage to the vehicle in the event of a heavy impact. “Basically, Roadsafe 4WD Protection Plates will act as a layer of armour underneath the vehicle!” said Tania.

Some key points of the Roadsafe 4WD Protection Plates include:

- Australian Designed & Manufactured
- Enhanced offroad protection from rocks, logs, mud & debris.
- Improves aerodynamics of the vehicle
- No welding or drilling required = easy bolt on installation
- Stylish & functional designs
- Precision laser cut 3mm steel

Roadsafe 4WD Protection Plates are Australian designed & made. They are manufactured in 3mm steel, zinc coated for longevity, and laser cut for precision. Plates can be painted or powder coated over the zinc treatment by the customer if required. All plates use the original bolt pattern, so no drilling required. There are a couple of 3rd plates whereby self tappers are used to attach the plate to the crossmember. Where bolts/nuts are required for fitment, they are supplied with the kit. We recommend the use of threadlocker during the installation & tightening of all nuts/bolts. Pressed ribs and folded reinforcements have been included to provide significant strength without adding unnecessary weight to the vehicle.

“Being Australian designed & produced means we are able to modify & upgrade designs much quicker than if dealing with an overseas manufacturer. Based on customer requests, recently we have modified the GU Patrol middle plate to suit for lifted vehicles and these are now available ex. stock”.

Where possible oil change access, without plate removal, has been integrated into the plate design.

Made in Australia, the Roadsafe 4WD Protection Plates range is second to none! Built tough to go the distance.
