

Landrover

Rear Trailing Arm

New to the range is a Double Cranked rear lower arm to suit for the Landrovers! Yes, we have taken the plunge & done something other than Patrol & Cruiser! Designed to suit all Landrover Defenders, Discovery 1 & Range Rover the new Double Cranked Arms are supplied complete with Heavy Duty Pin & High Flex rubber bushing. When Landrovers are lifted, the rear radius arm to chassis bushings become strained, this means lack of movement in the bushings, which limits suspension droop. Roadsafe Double Cranked rear arms are designed to relieve the strain on the bushings, and to improve suspension flex.
