

The Farmers Tow Hitch Kit

Mister hitches has put together components which are predominantly used for towing in the agricultural and mining sectors. The kit components comprise of a 50mm diameter tow ball with an extra long shank together with a clevis mount hitch to enable the tow vehicle to hitch up to utilities which have either a ball mount or a ring type coupling. A replaceable protective steel sleeve is fitted between the clevis mounts to protect the tow ball shank and provide additional strength to the hitch. A 25.4mm (1") clevis pin & clip is also available. All components sold separately and are not assembled.
