

# Upper Control Arms

## Toyota Hilux 05-on

The new Roadsafe range of Upper Control arms have been designed with ease of fitment and ongoing serviceability in mind and are a necessity for various IFS models that have been lifted 30mm+. The Roadsafe arms have been designed to restore camber and caster lost on the IFS vehicles once they have been lifted, by correcting the angle of the ball joint. Without restored camber and caster settings lifted IFS vehicles will eventually show excessive tyre wear and experience ride and steering issues.

With greater radius and tube sizing, the design allows clearance of the coils during articulation, with the outer radius also adjusted to allow for the fitment (in some cases) of larger tyres without rubbing on the arms during full lock. Manufactured in Heavy Duty 32mm OD (4mm wall thickness) STKM11A Carbon Steel Tube for optimum strength without putting too much additional weight on board.

We haven't gone with a complicated ball joint or bushing setup! We have designed the ball joint and bushing apertures to take OE Spec componentry. That way if you have a ball joint or bushing issue in an out of the way area, where getting spares can be a drama, you can replace the affected part with a standard OE spec factory or aftermarket component.

The Roadsafe Upper Arms are designed with 3 degrees fixed caster, and are optimally suited to lifts of 30-70mm, finished in black E-Coating for maximum durability, rust prevention and discreet installation.

Toyota Hilux 05-on Upper Arms are available now - with more applications due through soon! Arms are available as either 'each' without urethane bushings - or as a kitted pair including bushings.
