

Heavy Duty Tow Points

Ranger PJ PK & BT-50 Gen 1 (07-11)

Part Number: RP-RAN01
Bar Code: 9319478610439**RP-RAN01**

Roadsafe are pleased to release Heavy Duty Tow Points for the Ford Ranger PJ PK & Mazda BT-50 Gen 1 (2007-11). Designed to fit with standard bumper and factory alloy bar, the tow points have been destruction tested and subsequently rated with a WLL of 5000kgs. Mounted with 5 bolt points per side, the fixings include existing bolt locations of original tow points and brackets. Fitting these points with aftermarket bullbars is possible, however modification to the bull bar mounting brackets and/or additional hardware (longer bolts) is required.

The Roadsafe points have been designed to maintain maximum clearance, and are positioned above the lowest point of the vehicle. Sold as a pair (including points for Drivers & Passenger side, plus all mounting hardware) Roadsafe recommend the safe use of tow points as a matched pair, teamed with an equalising bridle for even force distribution across both points.

Now Available
