

DRIVING LIGHT LOCK KITS

Your Spotties or LED light bars are expensive - and offer a very practical upgrade to your vehicle. Unfortunately thieves will take advantage of your good nature in simply bolting these to your vehicle, by very quickly & easily unbolting them. All the thief has to do to knock off your lights is unthread a single nut on each light.

You can make things much more difficult for the unsuspecting thief by fitting your Spotties or LED light bars with the Roadsafe anti-theft locking nuts & bolts. Each kit comes complete with two nuts (or bolts) and a key that fits to both.

There are many different nuts and bolts with different hole patterns - and the chances that a thief has a matching key to your nuts or bolts is remote.

Each key is marked with a pattern number. Please ensure you record your pattern number in a safe place so if you misplace your key you can purchase a replacement. We DO NOT record the pattern number at point of sale.

For obvious reasons (!) the individual nuts or bolts are not marked with their pattern number!

How it works... the key has a specific stud pattern that matches to & engages with the recesses in the domed nut or bolt. This allows for the key holder to thread and unthread the nuts as required. The end of the key accepts a 13/16" socket or spanner.

The domed nut & bolt heads makes it near on impossible to undo the nut or bolt with multi grips or other similar tools.

The nuts & bolts come in a variety of sizes, to suit a large variety of LED light bars & Spotties, in addition to Aerials and other external bolt on devices. Check the threads prior to ordering. Secure your investment in your LED light bars and/or Spotties. Once tightened, the Roadsafe anti-theft locking nuts & bolts are very difficult to remove without the correct key.

VARIOUS SIZES AVAILABLE NOW
