Part Number SB016

RRP* \$90.00

Fuel Pump Guard

Barcode 9319478630437

The fuel pump mounted on the underside of the common rail RG Colorado / Dmax / MUX (2012-on) is located on the frame rail in a very precarious position, exposing fuel filters and drain plug to potential damage from rocks and debris when offroading. If the plug or screw in fuel filters are damaged the vehicle will lose all pressure to the fuel rail, which will result in engine failure. Simple to install, by easily unbolting four existing bolts, installing the guard, then refitting the four bolts, the Roadsafe Fuel Pump Guard is a simple solution.
