

TRANSMISSION SPACER KIT

NISSAN PATROL GU

The Roadsafe 4WD Transmission Spacer Kit aids in controlling the driveline vibration and noise after a lift is installed. The transmission spacer plates fit neatly between the transmission plate and the chassis, and works by spacing down the driveline thus reducing the driveline angle affected with the lift. The New Kit for GU Patrol now includes additional 12mm x 25mm OD spacers and longer bolts to allow for spacing of the factory bash plate following installation of the transmission spacers.
