

ROADSAFE UNDER VEHICLE PROTECTION SYSTEM

COMPATIBLE WITH TOYOTA LANDCRUISER 300 SERIES 2020+

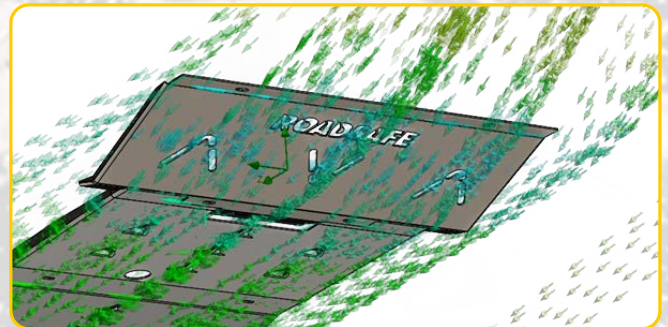

The latest under vehicle protection (UVP) system from Roadsafes is a complete flat belly design, ensuring a smooth surface from front to back. The Toyota Landcruiser 300 series UVP design required the addition of structural supports to increase strength and to utilize factory Toyota mounting points. The Roadsafes design provides full coverage of all critical mechanical components and access to the engine sump drain plug all while maintaining heat and air flow through and away from the transmission tunnel.

The design is strong, light, and rigid which provides fantastic protection from stones, rocks, and staking. The complete bash plate system attaches directly to or through all factory chassis holes and fastening points, no drilling required.

Air flow is managed with Roadsafes designed air ducting, this ducting is specifically designed to support transmission tunnel air flow through CFD fluid flow optimization and positioned to heavily reduce the chance of stake damage of critical components.

5mm thick ballistic rated Aluminum that possesses additional strength and hardness to withstand gouging from rocks and other obstacles.
