

# **BRAKE PROPORTIONING VALVE BRACKET**

## **TOYOTA LANDCRUISER 76-79**

Designed to suit Toyota Landcruiser 76-79 Series with a 3" lift, the Roadsafe Brake Proportioning Valve Bracket resets the front to rear brake bias back to factory specs.

The brake proportioning valve controls the amount of rear brake that is applied when the brake pedal is depressed. The higher the vehicle is lifted, the less rear brake is applied. To retain the standard brake bias on a lifted vehicle, the brake proportioning bracket is extended to reposition the valve, thus realigning the brake bias to the correct factory percentages.
