

VEHICLE Nissan Patrol GQ / GU
PRODUCT Rear Coil Tower Strengthening Brackets
Bolt-In Design - Pair
PRODUCT CODE SB012
BARCODE 9319478617438

It's quite common for the Nissan Patrol GQ/GU rear coil towers to fail, resulting in a damaged chassis which can also damage both fuel and brake lines, leading to expensive & time consuming repairs. Blackhawk 4x4 have designed a comprehensive reinforcing system to assist in carrying and spreading the load through the chassis rails. Using CAE, the primary brace is laser cut and CNC folded from one piece of 4mm carbon mild steel.

This system incorporates an on-car adjusting tie bar for each side that ties into the forward cross member triangulating the coil tower brace into the chassis, providing increased rigidity in the system and an additional load path to share the load.

Install is very straightforward with basic hand tools; no cutting or welding required. Works with large heavy duty coils found in GVM upgrades and coil insulators and factory or aftermarket Blackhawk BS002 bump stop kits will fit with this system installed.

E-Coated Black Finish | Marked Left & Right | Fully Bolt-In - No cutting or welding | Shared Load Restraint System | On-Vehicle Adjustment
