

VEHICLE JK Jeep

PRODUCT Rear Track Bar Relocation Bracket

PRODUCT CODE SB053

BARCODE 9319478658134

Lifted JKs have a tendency to suffer from bump steer as the short track bar has too much angle with a limited arc. Blackhawk have developed a bolt on adjustable height solution for mounting your track bar on lifted vehicles. The new Track Bar Bracket simply bolts around the axle tube and picks up the original track bar mount. Various height options for 2", 3" or 4" of lift are available by selecting the correct height hole during installation.

CNC laser cut & folded from 6mm high-carbon mild steel with minimal joins, providing maximum strength and product accuracy and ensuring a neat fit every time. Quality hardware featuring Glenloch nuts for their superior mechanical locking properties. Zinc plating and black E-coat finishes on all hardware follows the same high-quality standard of finish as original equipment.
