

5 & 6 Stud Wheel Spacers

To give your vehicle a good wide stance, will create stability when off road, allowing you to have more confidence on side slopes. To do this you need to have the greatest distance available between the tyres. This will give your vehicle a larger overall footprint on the ground. Good quality wheel spacers can provide this enhanced footprint, pushing your wheels and tyres out.

Another great use for wheel spacers is when using wide tyres on your vehicle, you may have issues with the tyres touching on your chassis when turning, using wheel spacers you push the wheels out, and away from the chassis and or body allowing you to clear the tyres. Vehicles fitted with Alloy rims may need to check and source replacement nuts to mount rim to spacer. All spacers are Silver anodized to prevent corrosion and maintain quality.

Wheel spacers are designed and sold for off road use only, the consumer must contact their local road authority for roadworthy inquiries.
