

# Tow Ball Locking Sleeve

Have you ever been frustrated trying to fit a tow ball and the ball just keeps spinning when trying to tighten the nut? Well, now this problem is solved! All you need is a flat sided tow ball, a suitable wrench and the new mister hitches tow ball locking sleeve.

The mister hitches team have designed an innovative product that when used with the correct tow ball makes fitting the ball so much easier and without damaging the neck or flange of the tow ball.

The mister hitches tow ball locking sleeve is available to fit either 65mm or 75mm wide ball mounts and most flat sided tow balls.

The sleeve is fitted directly under the tow ball between the tow ball and the ball mount. The flat sided flange of the tow ball is securely held by the sleeve and this stops the ball from spinning, allowing single wrench torquing of the tow ball nut.

The mister hitches tow ball locking sleeve has a patented design and is powder coated for corrosion resistance.

*Also available is an Australian Standards compliant 50mm 3.5t chrome tow ball with flat sides in both bulk and clamshell packaging.*

**MH-TBS65** - suits 65mm wide ball mount platforms

**MH-TBS75** - suits 75mm wide ball mount platforms
