UCA3957R – FORD RANGER PX3 FITMENT

UCA3957R was designed to fit Ford Ranger PX1 & 2 (and Ford Everest).

When fitting UCA3957R to the current PX3 model a minor modification to the arm is required to provide adequate clearances.

Remove, by cutting, the ABS tab closest to the chassis bush. Following removal, paint arm area with a suitable black paint to prevent corrosion.

Secure the ABS line, with cable ties, to the UCA along the lower edge of the arm, clear of the strut.

Cycle the suspension once completed to ensure adequate clearances to all moving parts.

A rolling change is currently in place to modify the ABS tab to enable direct fitment for all PX Ranger models.
