JK JEEP WRANGLER STEERING ARMS

New to the range is our Heavy Duty ADJ steering arms for JK Jeep's.

Manufactured from the same 300mpa grade DOM tube all our HD steering arms have been for 10 years now and still with a lifetime warranty against bending.

The JK arms both feature on car adjustment thanks to a threaded adjuster sleeve that screws directly into the 6.3mm thick DOM tube – no welded adaptors & are mechanically secured by a high tensile pinch bolt featuring Glenloch nuts for added confidence. The Tie rod end screws into the sleeve and as a double lock measure is supplied with a Jam nut to make sure they don't come undone.

Machined in the centre of the arm is relief for the wheel aligner to easily adjust without scratching up your new HD arms.

Roadsafe manufactured greaseable ball joints offer plenty of articulation to suit the biggest of lifts – checked during development here in Melbourne! These come supplied with a chromoly hardened ball stud and double convoluted boot to ensure maximum strength and durability. All retaining clips and hardware are zinc plated or e-coated to prevent any corrosion.

TR3096L – TIE ROD ARM

**DL002
DRAGLINK**
