

MECHANICAL RESPONSIBILITY CHECK YA NUTS!

It is a responsibility of all parts fitters both trade qualified and DIY to ensure any critical mechanical locks are checked upon fitment. This could be jam nuts on adjusters, nuts & bolts on control arms or ball joint mount bolts. Also worth noting is to ensure all locking methods are employed correctly with the use of split pins, split washers, Loctite® or other locking aids as per manufacturers guidelines.

Roadsafe strives to deliver quality products to a high standard however with all things manufactured, the onus is on the fitter as the last person with the product to ensure appropriate fitment.
